10+ hours at work

Prompt to generate PRD

Help me create a comprehensive Product Requirements Document (PRD) for [product/feature name].

I need to clearly define what we're building, why we're building it, and how it should work.

First, ask me about:

- The problem this product/feature solves
- Our target users and their needs
- Business objectives and success metrics
- Timeline and resource constraints
- Any existing research, designs, or technical considerations

Then, help me create a structured PRD with these sections:

1. Executive Summary

- Brief overview of the product/feature
- The core problem being solved
- Key benefits and expected outcomes
- Strategic alignment with company goals

2. Problem Statement & User Needs

- Detailed description of the problem
- User personas and their specific needs
- Current pain points and limitations
- How this solution addresses these needs

3. Market & Competitive Analysis

- Target market size and segments
- Competitive landscape
- Differentiation strategy
- Market trends and opportunities

4. Product Goals & Success Metrics
 - Primary and secondary objectives
 - Key performance indicators (KPIs)
 - How success will be measured
 - Baseline metrics and targets
5. User Stories & Requirements
 - Comprehensive list of user stories
 - Functional requirements
 - Non-functional requirements (performance, security, etc.)
 - Technical requirements and dependencies
6. User Experience & Design
 - User flows and journeys
 - Key screens or interactions
 - Design principles and guidelines
 - Accessibility considerations
7. Technical Considerations
 - Architecture overview
 - System dependencies
 - API requirements
 - Data requirements and models
 - Security and compliance needs
8. Rollout Strategy
 - Phasing and prioritization
 - Beta testing approach
 - Launch plan
 - Monitoring and feedback collection
9. Risks & Mitigations
 - Potential risks and challenges
 - Mitigation strategies
 - Open questions and assumptions
10. Timeline & Milestones
 - Development phases
 - Key milestones and deliverables
 - Dependencies and critical path

For each section, provide clear, specific content that avoids ambiguity and gives the development team everything they need to build the right solution.

Prompt to plan your product roadmap

Help me create a strategic product roadmap with clear milestones for [product name]. I need to plan our development phases and communicate our direction to stakeholders.

First, ask me about:

- Our product vision and key objectives
- Our prioritized feature list (MoSCoW or similar)
- Available resources and team capacity
- Key deadlines or market timing considerations
- Known dependencies or constraints
- Stakeholder expectations

Then, guide me through creating a roadmap with:

1. Roadmap Horizons

- Near-term (next 1-3 months) with specific deliverables
- Mid-term (3-6 months) with planned feature sets
- Long-term (6+ months) with strategic directions
- How to balance specificity vs. flexibility at each horizon

2. Milestone Definition

- 3-5 key milestones that represent significant product evolution
- Clear success criteria for each milestone
- Logical progression that builds toward our vision
- Realistic timeframes based on our capacity

3. For each milestone:

- Theme or focus area
- Core user stories and features included
- Expected user and business outcomes
- Technical foundation being established
- Key metrics and KPIs to track
- Dependencies and prerequisites

4. Release Planning

- How milestones map to specific releases
- Cadence of releases (continuous, scheduled, etc.)
- Beta or staged rollout considerations
- Feature flagging strategy

5. Resource Allocation

- Team capacity requirements for each phase
- Skills or specialists needed at different points
- Potential bottlenecks or constraints
- External dependencies or partnerships

6. Risk Management

- Potential delays or challenges
- Contingency plans and buffer strategies
- Decision points for re-evaluation
- How to handle scope changes

7. Communication Format

- Visual representation of the roadmap
- How to present to different stakeholder groups
- Level of detail appropriate for each audience
- How to set expectations about certainty vs. flexibility

Please help me create a roadmap that is both aspirational and realistic, with enough detail to guide execution while maintaining flexibility to adapt to new information.

Prompt to prioritise

Help me prioritize my product backlog using the MoSCoW method (Must have, Should have, Could have, Won't have). I need to make clear decisions about what features to include in our initial release and subsequent iterations.

First, ask me about:

- My product vision and core value proposition
- The primary user problems we're solving
- Our development timeline and constraints
- Any non-negotiable requirements (legal, security, etc.)
- The feature ideas currently in our backlog

Then, guide me through:

1. Establishing Prioritization Criteria

- Business value (revenue, retention, acquisition)
- User value (pain point severity, frequency of use)
- Implementation complexity and effort
- Dependencies and technical constraints
- Strategic alignment with company goals

2. MoSCoW Categorization

- MUST have: Critical features without which the product will fail
- SHOULD have: Important features that add significant value but aren't critical
- COULD have: Desirable features that would enhance the product but can be delayed
- WON'T have: Features explicitly excluded from the current scope

3. For each feature in my backlog, help me:

- Evaluate it against our prioritization criteria
- Assign it to the appropriate MoSCoW category
- Document the rationale for this categorization
- Identify any dependencies or prerequisites

4. Scope Definition

- Define our Minimum Viable Product (MVP) based on the MUST haves

- Create a roadmap for incorporating SHOULD and COULD haves in future iterations

- Establish clear boundaries for what's in and out of scope

5. Trade-off Analysis

- Identify potential conflicts or resource constraints
- Suggest approaches for resolving prioritization conflicts
- Highlight risks associated with delaying certain features

6. Communication Strategy

- How to explain our prioritization decisions to stakeholders
- How to manage expectations about features in each category
- How to revisit and adjust priorities as we learn more

Please be specific and challenge any assumptions that might lead to scope creep or misaligned priorities. Help me make tough decisions rather than trying to include everything.

Prompt to get Tech

Stack advise

Help me select the most appropriate technology stack for my [product type] project. I need to make informed decisions about which technologies to use based on my specific requirements and constraints.

First, ask me about:

- The type of product I'm building (web app, mobile app, etc.)
- My target users and their technical environment
- Key functional requirements and features
- Non-functional requirements (performance, scalability, security)
- My team's current technical expertise
- Timeline and budget constraints
- Long-term maintenance and scalability needs

Then, help me evaluate options for:

1. Frontend Technologies

- Framework options (React, Vue, Angular, etc.)
- Mobile approach (native, hybrid, PWA)
- UI libraries and design systems
- State management solutions
- Performance considerations

2. Backend Technologies

- Language options (Node.js, Python, Ruby, etc.)
- Framework options within chosen language
- API architecture (REST, GraphQL, etc.)
- Authentication and authorization approaches
- Background processing needs

3. Database Solutions

- Relational vs. NoSQL options
- Specific database technologies
- Data modeling considerations
- Scaling strategy
- Backup and recovery approach

4. Infrastructure & DevOps

- Hosting options (cloud providers, self-hosted)
- Containerization and orchestration
- CI/CD pipeline options
- Monitoring and logging solutions
- Security considerations

5. Third-party Services & APIs

- Build vs. buy decisions
- Integration requirements
- Vendor evaluation criteria
- Cost implications

For each category, provide:

- 2-3 recommended options with pros and cons
- Specific factors that make each option suitable for my case
- Potential risks and mitigations
- Cost and learning curve considerations
- Future-proofing and scalability implications

Conclude with a recommended stack that balances my requirements, constraints, and long-term considerations, with clear rationale for each technology choice.

Prompt for product vision & strategy

Help me develop a comprehensive product vision and strategy for [product name]. I need to articulate where we're going and how we'll get there to align my team and stakeholders.

First, ask me about:

- The core problem we're solving and for whom
- Our validated customer insights and pain points
- The market landscape and competitive environment
- Our unique capabilities or advantages
- Any constraints or limitations we face

Then, guide me through creating:

1. Vision Statement

- A concise, inspiring description of the future we want to create
- The long-term impact we aim to have for our users and the market
- How the world will be different when we succeed

2. Mission Statement

- What we do, for whom, and the primary value we deliver
- How we're different from alternatives
- Our core principles and approach

3. Strategic Pillars (3-5)

- The key focus areas that will drive our success
- How each pillar supports our vision and mission
- Why these pillars matter more than other potential focuses

4. Success Metrics

- How we'll measure progress toward our vision
- Key performance indicators for each strategic pillar
- Leading and lagging indicators of success

5. Strategic Roadmap

- Major phases or milestones over the next 12-18 months
- Key capabilities we need to build in each phase
- How these phases build toward our vision

6. Guiding Principles

- Decision-making frameworks for the team
- Trade-offs we're willing (and not willing) to make
- How we'll prioritize competing opportunities

7. Narrative

- A compelling story that ties everything together
- How to communicate this strategy to different stakeholders
- Addressing potential objections or concerns

For each component, provide examples and templates, then help me craft my own version that's specific, meaningful, and actionable for my product context.

Prompt to visualise the user journey

Help me create a comprehensive user story map for [product/feature]. I need to visualize the user journey and organize our backlog into a coherent narrative structure.

First, ask me about:

- The primary user personas we're targeting
- The main goals these users want to accomplish
- The overall scope of the product or feature
- Any existing user research or journey maps we have
- Our development timeline and constraints

Then, guide me through building a user story map with:

1. Backbone (User Activities)

- The high-level activities users perform to accomplish their goals
- The natural sequence of these activities from start to finish
- How different user personas might have different activity flows

2. Walking Skeleton (User Tasks)

- The specific tasks users perform within each activity
- How these tasks connect to form complete workflows
- Alternative paths or edge cases in the user journey

3. User Stories

- Detailed user stories for each task following the format:
"As a [user type], I want to [action], so that [benefit]"
- Acceptance criteria for each story
- Relative complexity or effort estimates

4. Releases or Slices

- How to organize stories into meaningful releases
- What constitutes our Minimum Viable Product (MVP)
- Subsequent releases that build upon the MVP
- How to ensure each release delivers end-to-end user value

5. Prioritization

- Which stories are must-haves vs. nice-to-haves
- How to balance user value, business value, and risk
- Dependencies between stories that affect sequencing

6. Gaps and Risks

- Potential gaps in the user journey
- Technical or design challenges we should anticipate
- Research questions that need answering

Please provide a structured, visual representation of the story map that I can share with my team, along with guidance on how to use this map for sprint planning and backlog refinement.

Prompt to implement the JTBD framework

Help me apply the Jobs to be Done (JTBD) framework to understand why customers would "hire" my product or service.

First, ask me about:

- My product/service concept
- My target customers
- The context in which they'd use my solution
- Alternatives they're currently using

Then, guide me through identifying:

1. Functional Jobs

- What practical tasks are customers trying to accomplish?
- What functional problems are they trying to solve?
- What practical outcomes are they seeking?

2. Emotional Jobs

- How do customers want to feel when using the solution?
- What emotional states are they trying to avoid?
- What would give them peace of mind or satisfaction?

3. Social Jobs

- How do customers want to be perceived by others?
- What social status or relationship outcomes do they want?
- How does the solution affect their social identity?

4. Job Statements

- Help me craft 3-5 complete JTBD statements in this format:
 - "When [situation], I want to [motivation], so I can [expected outcome]"

5. Prioritization

- Help me identify which jobs are:
 - Most important to customers
 - Most underserved by existing solutions
 - Most aligned with my product's unique capabilities
